

Summary

- 7+ years in backend development, distributed systems, and cloud architectures across automotive, healthcare, and manufacturing.
- Built real-time streaming, HIPAA-compliant apps, and automated supply chain systems.
- Expertise in microservices, high-scale data processing, and cloud-native applications.
- Designed large-scale pipelines with Kafka, Cassandra, PostgreSQL, and Redis.
- Collaborated with clients to drive business decisions and improve product design.
- Passionate about clean architecture, DDD, TDD, and system optimization.

Skills

Programming Languages

- **Kotlin, Java, Python, C#**

Frameworks & Architectures

- **Spring Boot, Micronaut**
- **Event-Driven Architecture**
- **Microservices**
- **Domain-Driven Design (DDD)**

Data Streaming & Processing

- **Kafka, Kafka Streams**
- **Telemetry, CAN, and Event Data Processing**

Databases & Storage

- **PostgreSQL, Cassandra, Redis**

Cloud & Infrastructure

- **AWS, Kubernetes (hosted on AWS)**
- **Docker, Swarm**
- **Terraform, Vault**

CI/CD & DevOps

- **Jenkins, CI/CD Pipelines**
- **Infrastructure as Code (IaC)**

Testing & Code Quality

- **TDD, JUnit, MockK, Kotest**
- **SonarCloud, Detekt**

API & Communication

- **REST APIs, GraphQL, gRPC**

Monitoring & Observability

- **Prometheus, Grafana**

Education

B.Tech (Information Technology)
Walchand College of Engineering
Sangli (2014 - 2018)
CPI: 8.06

SANKALP YERAWAR

Experience

Solution Consultant

Oct 2022 - Present

Sahaj Software, Pune

- Working on a connected vehicle project for a vehicle manufacturer in Java
- Managing real-time streaming data, including Telemetry, CAN, and event data, using Kafka and Kafka Streams to enable data-driven decision-making
- Handling large-scale data storage with Cassandra, Redis, and PostgreSQL, ensuring high availability and performance
- Collaborating with clients to design and improve connected vehicle solutions, contributing to business decisions that enhance product development
- Developed an MES application using Kotlin and Spring Boot to optimize manufacturing workflows
- Built a replenishment application to automate supply chain processes and reduce manual inefficiencies in 15 days
- Managing service deployments on Kubernetes hosted on AWS, utilizing Jenkins, Vault, and Terraform for CI/CD and infrastructure automation
- Implemented monitoring and observability with Prometheus and Grafana to optimize system performance

Software Development Engineer - 2

Nov 2021 - Oct 2022

Medly Pharmacy, Pune

- Developed HIPAA-compliant cloud-based applications to streamline administrative services for healthcare entities.
- Collaborated with cross-functional teams to design distributed systems using Serverless computing, AWS Lambda, and event-driven architecture
- Built REST APIs with a domain-driven design approach in Kotlin using the Micronaut framework; utilized Kotest for testing and employed SonarCloud and Detekt for static code analysis
- Managed data storage and retrieval using Amazon RDS for PostgreSQL
- Developed dynamic browser applications using React
- Conducted requirement analysis, participated in code reviews, and coordinated with teams across various levels
- Worked on addressing technical debt to enhance the performance and maintainability of existing codebases

Software Engineer

Jul 2018 - Nov 2021

Siemens PLM Software, Pune

- Designed and implemented a Command Prediction microservice in C#, applying advanced data structures and prediction algorithms
- Applied MVC architecture principles, including Dependency Injection, Singleton pattern, Repository pattern, and Factory pattern
- Developed a dashboard application using GraphQL and Python, enabling enhanced data visualization and reporting
- Integrated multi-database support, ensuring compatibility with Oracle, MSSQL, and PostgreSQL
- Deployed microservices using Docker and Swarm, facilitating efficient scaling and management
- Authored a white paper on Object-Based APIs using GraphQL and OData, providing technical insights for API design
- Prototyped a multi-API support framework using gRPC and Protocol Buffers, enabling seamless interoperability across services
